这个过程过于简单了，水一篇得了。我使用的机器是 ROG Zephyrus G14 2024 + Arch Linux 。

先找到一个 repo ，gpu-unlock-ada ，clone 之后使用如下方法在机器中编译并安装对应包：

```shell
make install-arch
sudo mkinitcpio -P
```

由于我的机器使用的是 Limine ，所以需要在 cmdline 后加半行启动选项：

```
/Arch Linux (linux)
    protocol: efi
    path: boot():/EFI/Linux/arch-linux.efi
    cmdline: root=PARTUUID=2fef8961-e3cd-46a5-ba36-
d976353f35d6 zswap.enabled=0 rootflags=subvol=@ rw
rootfstype=btrfs gpu_unlock.targets=0000:01:00.0
gpu_unlock.ad107_experimental=1
```

冷却 30s 后重启。

查看启动日志里是否出现了 unlock ：

```
sudo journalctl -k -b | grep gpu_unlock
[sudo] password for lumiere:
Oct 27 14:50:03 wirbelwind kernel: Command line:
root=PARTUUID=2fef8961-e3cd-46a5-ba36-d976353f35d6

```

出现了，回到原 repo ，再检查一次：

```
$ python3 tools/read_sm_rates.py --expect-uuid
GPU-666c50a2-aca8-340c-1aa7-70995d9d69fa
{"gpu": "GPU-666c50a2-aca8-340c-1aa7-70995d9d69fa, NVIDIA
